

Control... with a touch!

There are purpose fitted demonstration rooms, which are open to prospective homeowners, architects and consultants. There you can experience the wonderful simplicity and efficiencies of the 'one touch' technology available.

When the Setpoint Group decided to expand into new areas, they wanted to be able to utilise their widespread knowledge and years of experience in the technology based field of building automation. The home and lighting automation market was a natural choice.

The challenge then was to find a product range that "ticked all the boxes" i.e. leading technology, cost effective, good functionality, reliability, ease of setup and use, fully integrated systems available and stylish! After extensive research of global Companies, Smart-HDL was the company that offered all of the above. Their award winning products are available here right now through Smart-HDL (NZ) Limited.

The Smart-HDL range covers: lighting and dimming, audio and media streaming distribution, energy monitoring and usage, motorised curtains and blinds, heating, ventilation and air conditioning, security and safety, and irrigation. Interconnectivity solutions to other systems/devices in the home are also possible through the very clever use of 'plug and play' technology.

Distribution of Smart-HDL products in NZ is through a nationwide network of trained and Certified Dealers, supported by the team at Smart-HDL (NZ) Ltd. This means that dealers have access to full technical, sales and training support

which in turn benefits the home owner.

There are purpose fitted demonstration rooms at the Christchurch and Wellington Offices, which are open to prospective homeowners, architects and consultants. There you can experience the wonderful simplicity and efficiencies of the 'one touch' technology available.

The Setpoint Group, including Smart-HDL (NZ) Ltd, are members of the Green Building Council showing a commitment to supporting green and sustainable building practices. The Setpoint Group has already completed a number of prestigious green building projects.

As the world moves further towards energy saving and sustainability, a key feature of the Smart-BUS automation system is that it really takes control of energy usage in the home. The individual Smart-bus devices are also 'green'; they do not use power while on stand-by and when in use the power consumption is around only 24mA per device!

By using the latest DLP technology, a fully integrated solution from Smart-HDL will not only add a stylish and modern aspect to the home, but now makes automation easier and allows to you take control of just about everything... with a touch!
